

# CHERRYBOMB

Thank you for your interest in booking Cherrybomb.

Here are some guidelines and technical specs so we can set up as quickly as possible and avoid any unexpected delays on the day:

## **Space and Location**

We need an area of about 5 metres wide by 3metres deep to accommodate all our PA equipment, instruments and lighting. If the performance area is not on the ground floor of the building, please make us aware before confirming.

## **Power**

We require at least two dedicated mains sockets at or very close to the performance area.

If using a generator, this must be a 'continuous supply' type as we need the power to be uninterrupted.

## **Noise**

Please check with the host venue whether they have any noise restrictions in place, curfew times or decibel meters. It is critical that we are made aware of any sound or time restrictions in advance.

## **Public Liability Insurance**

We hold Public Liability Insurance of £1million and a certificate is available on request.

## **Electrical Testing**

All our relevant equipment is PAT tested and a certificate is available on request.

## **Music**

If we have arranged for us to play background music in addition to the band, please let us know if you have any particular preference for type of music. If you have Spotify, you can create your own playlist, share it with us in advance and we can play it on the day. Contact us for information about this.
